Table of Contents

What is the power of LaTeX?

- The possibility of unlimited customization
- Free layout system for high-quality documents
- Ease of working with complex mathematical formulas
- The main task of the author is not design, but content
- Multi-lingual typesetting

Markdown

- Using the *underbrace* command, you can draw a line under an important word;
  Example!
- Using the *underscore* command, you can combine the information with a parenthesis at the bottom;
  $$\underbrace{a + b + c + d}_{Example!} + e + f$$
- Using the *xrightarrow* command, you can get an arrow with an inscription on top;
  $Example \xrightarrow{function"!"} Example$!
- Using the *star* command, you can get an asterisk-symbol;
  $\star Example$!

Impressions

This mini-course allowed me to finally start learning LaTeX. The word "forced" is inappropriate here, because I got incredible pleasure from the opportunities that this system provides. After I finally "assembled" the final file, I realized what the real quality of the document is. It's like I wrote a book or a scientific article myself. It's inspiring.
